About

I am a creative and passionate Colombian software developer mostly focused on Android apps but with an interest for multiple platforms and tools. I consider myself a curious and inquisitive person, so on my spare time I like to work on side projects and try to constantly learn something new or improve my skillset.

Experience

iOS Developer, Vezio Inc.; Remote – Jul 2018 ~ Present
I am currently having the responsibility of creating the initial iOS app for the company's product and making it as useful and featured as the previous developed Android app, and then continue working on both to make them grow as needed.

Android Developer, Vezio Inc.; Remote – Oct 2017 ~ May 2018
As the very first Android developer in the team, I had the opportunity to start the Android app development and take it from the idea to the final product, reaching most of features for the initial version and making it almost as functional as the companion desktop and web apps.

Freelance Developer and Design Enthusiast; Remote – Jun 2015 ~ Present
I have created a few Android apps as personal projects and also was contacted to do a couple design related works, mostly focused on Material Design iconography.
I am also open to new interesting projects that could help me continue learning.

Education

Universidad Pedagógica y Tecnológica de Colombia UPTC; Sogamoso, Colombia – Computer Science BSc., 2015 ~ Present

SENA; Sogamoso, Colombia – Mechatronics Technologist, 2013 ~ 2015
